QUALITY POLICY

It is the policy of OVNI to provide its customers, other stakeholders and interested parties with services which comply in all respects with their agreed and 'other' requirements and which integrate with their stated expectations and needs.

The Directors implement its quality objectives through the operation of a Quality System. The Quality System includes measurable quality management objectives, policies, organisation and procedures associated with all relevant Company activities. The effective operation of the Quality System throughout the company requires the exercise of individual responsibility by each person.

OVNI operates a policy of continuous quality improvement which relates to the personnel, materials, equipment and systems employed within OVNI. This policy is integrated with the operation of the Quality System and applies to internal processes as well as external services for the Customer.

As part of this Quality Policy, the Quality Representative has the responsibility and authority to develop, co-ordinate and monitor the implementation and effectiveness of the OVNI Quality System.

David McCunnie – Managing Director
